FOREWORD

The Department of Water Resources, as Watermaster, is pleased to submit this report on water supply conditions in the West Coast Basin during the 2005-2006 fiscal year. The report is prepared annually in accordance with the provisions of the Los Angeles County Superior Court Judgment in the West Coast Basin. The Judgment, together with Part 4, Division 2, of the California Water Code, authorizes this publication and the Department's administration of the Watermaster Service Area.

In the West Coast Basin, the Parties' allowable extraction for 2005-2006 was 76,470 acre-feet, of which 34,168 acre-feet of Adjudicated Rights was extracted and 12,628 acre-feet was kept as carryover.

This report includes information not only on groundwater extractions but also on the use of imported water and recycled water, the recharge operations, the administration of the water exchange pool, and the finances of the Watermaster Service.

The Watermaster wishes to acknowledge and express appreciation for the assistance and support received from the many public and private organizations and individuals whose contributions were essential to this report.

The success of Watermaster Service is dependent on continued cooperation and communication between the Watermaster and the water users.

Mark Stuart, Chief
Southern District
and Watermaster

I. INTRODUCTION

The West Coast Basin underlies 160 square miles in the southwestern part of the Los Angeles Coastal Plain in Los Angeles County (Figure 1). The Basin is bounded on the west by Santa Monica Bay, on the north by the Ballona Escarpment, on the east by the Newport-Inglewood Uplift, and on the south by San Pedro Bay and the Palos Verdes Hills. Twenty incorporated cities and several unincorporated areas overlie the Basin. A substantial portion of the water needed by the residents and industries in the area overlying the Basin is pumped directly from the groundwater in storage.

In 1945, when intrusion of sea water caused by declining water levels threatened the quality of the groundwater supply, legal action was begun to halt the overdraft and prevent further damage to the Basin. In 1955, the Superior Court of Los Angeles County appointed the Department of Water Resource as the Watermaster to administer an Interim Agreement, and in 1961, the Court retained the Department as the Watermaster of the Final West Coast Basin Judgment.

The Watermaster assists the Court administer and enforce the provisions of the Judgment. Among other duties, the Watermaster monitors groundwater levels and extractions and reports all significant water-related events in the Basin to the Court and to the parties to the Judgment. The activities of the Watermaster are key components for the effective management of the Basin's groundwater resource.

This report summarizes the activities of the Watermaster, the conditions of the groundwater supply, and the quantities of water used and replenished; it also includes a financial report for the 2005-2006 fiscal year. There are three parts to the report: (1) Introduction, (2) Summary of Water Conditions and Operations, and (3) Details of Water Use and Operations, which contains the figures and tables on water supply, water use, water replenishment, and administration costs. Appendix A contains the continuing history of Watermaster Service operations and the duties and functions of the Watermaster. Appendix B contains adjudicated rights of the parties. Appendix C contains groundwater extractions. Appendix D contains changes in well status.

FIGURE 1 – WEST COAST BASIN

II. SUMMARY OF WATER CONDITIONS AND OPERATIONS

All information is for fiscal year 2005-2006 except where noted.

Precipitation

The mean precipitation over the West Coast Basin was 10.10 inches, which is 79 percent of the long-term mean of 12.73 inches.

Groundwater Level Elevations

Groundwater level elevations were generally higher in spring 2006 than in spring 2005.

Water Quality

Mean Values of Concentrations, in mg/L

<u>Constituent</u>	<u>Groundwater</u>	<u>Colorado River Water at Lake Mathews</u>	<u>State Water Project Water at Castaic Lake</u>
Chloride	166	95	47
Sulfate	98	265	67
Hardness (as CaCO ₃)	325	309	135
TDS	685	658	271

Wells

There are 59 active extraction wells, 52 inactive extraction wells, 240 injection wells, and 444 observation wells.

Spreading Operations

Los Angeles County Department of Public Works spread 125,789 acre-feet in the Montebello Forebay. The amount of water spread this year was 40 percent less than the amount spread in 2004-2005.

Extractions

Parties extracted 34,168 acre-feet of Adjudicated Rights.

Overextractions

Two parties had a combined total overextraction of 146.23 acre-feet. (Table 1).

Imported Water

Parties imported 213,438 acre-feet. California-American Water Company a nonparty, pumped and imported 3,324.46 acre-feet of water from Central Basin and imported 681.8 acre-feet from West Basin MWD.

Exported Water

Golden State Water Company exported groundwater to portions of its service area to the west of the Palos Verdes Hills.

In-lieu Replenishment

The City of Los Angeles participated in the In-Lieu program in an amount of 1,503.00 acre-feet (Table 8) and the City of Manhattan Beach 910.50 acre-feet.

Water Use

The total amount of water (including recycled) used in the area overlying the basin was 3.2 percent less than the amount used in 2004-2005.

Water Rights

There were no requests for exchange pool water.

There were 13 water right leases totaling 10,882.20 acre-feet.

There was one permanent transfer of water right ownership and one name change. Hollywood Park Land Company, LLC purchased 282.00 acre-feet of Adjudicated Rights from Churchill Downs California Company. Southern California Water Company changed its name to Golden State Water Company. Western Water Service Company has zero Adjudicated Rights, but it remains a party for the duration of its long-term lease agreement with Chevron USA Inc.

One party (Desser Enterprises) with zero Adjudicated Rights extracted 0.60 acre-feet.

Oil Recovery and Basin Cleanup

Chevron USA Inc. operated an oil recovery and basin cleanup program at its El Segundo refinery.

Mobil Oil Corporation (Oil Recovery) pumped 373.65 acre-feet this year as part of a hydrocarbon clean-up program.

California Water Service Company (Dominguez) did not pump this year from its West Basin Desalter Project (Brewer Desalter).

WRD's extractions from the Goldsworthy Desalter well have not met the 1,000 ppm minimum chloride concentration standard required by the court. The court ordered Desalter Working Group is preparing recommendations for the court.

Watermaster Income, Expenditures, and Budget

Watermaster income was \$252,842 and expenditures were \$255,911. (Table 3)

The tentative budget of \$242,000 was mailed on May 5, 2005, and it became the final on June 1, 2005. (Table 11)

Summary of pertinent data for Fiscal Years 2004-2005 and 2005-2006.

Item	Fiscal year 2004-2005	Fiscal year 2005-2006
Active pumpers	23	24
Active nonparties	0	0
Adjudicated Rights, in acre-feet	64,468.25	64,468.25
Watermaster expenses, total	\$221,450	\$255,911
Watermaster expenses, per Adjudicated Right	\$3.44	\$3.97
Rainfall, in inches	28.64	10.10
Injection at barrier projects, in acre-feet (including recycled water)	19,810	19,261
Extractions, in acre-feet*	44,329.14	36,791.62
Imports, in acre-feet**	212,864	214,303
Recycled water, in acre-feet	24,065	23,654
Exports, in acre-feet	0	0
Total water use (by parties), in acre-feet	281,258	274,749
* Includes water pumped for oil recovery production by Mobil Oil Corporation and Desalter production by California Water Service Company (Dominguez) and WRD Goldsworthy Desalter.		
** Includes barrier imports by Los Angeles County Department of Public Works.		

Tables 1 and 2 and Figure 2 summarize and illustrate the Basin's operations for fiscal year 2005-2006. The details of operations and the remaining tables and figures are given in the next section.

TABLE 1. OVEREXTRACTIONS*
In acre-feet

Party	(1) Adjudicated Right	(2) Allowable Extraction*	(3) Amount Pumped	(4) Overextraction (2) - (3)	(5) Allowable Overextraction **
Pacific Crest Cemetery Co.	39.40	57.09	61.39	-4.30 ***	3.94
Roman Catholic Archbishop of Los Angeles	72.30	146.76	288.69	-141.93 ***	7.23
Total				-146.23	
* See Table 2 for derivation.					
** Computed as 2 acre-feet or 10 percent of Adjudicated Right, whichever is greater Including carryover provisions.					
*** Violation of Judgment. Party will be required to eliminate overextractions by leasing water, buying from the Exchange Pool, reducing pumpage, or purchasing imported water.

Water Rights

- Table 13 - Transfers of Adjudicated Rights (p. 26)

Meter Testing Program

This year, 32 meter tests, including several retests, were performed. Three meters were fast by 14 to 31 percent. Watermaster schedules all meters to be tested every two years.

In addition, Watermaster performed field investigations of new and destroyed wells, verified discrepancies between reported extractions and actual water meter readings, and made necessary adjustments to water production reported by parties.

TABLE 4. REPENISHMENT OPERATIONS *

Water Source	Quantity in acre-feet	
	2004-2005	2005-2006
Local runoff	152,991	57,491
Recycled water:		
Whittier Narrows WRP	6,837	8,385
San Jose WRP	21,236	28,962
Pomona WRP	2,315	2,802
MWD water purchased by WRD	25,833	28,149
Make-up water from Upper San Gabriel Basin	_____	_____
Total	209,212	125,789

* Water spread in the Central Basin provides subsurface recharge to West Coast Basin. Provisional data provided by Los Angeles County Department of Public Works, as to amount actually spread in Montebello Forebay area.

TABLE 5. BARRIER OPERATIONS*

Item	West Coast Basin Barrier	Dominguez Gap Barrier
Quantity injected, in acre-feet		
Imported	6,093	7,600
Recycled	4,383	1,185
Number of injection wells	153	87
Number of injection wells constructed during 2006 fiscal year	0	0
Number of observation wells	276	168
Number of observation wells constructed during 2006 fiscal year	0	0

*Provisional data provided by the Los Angeles County Department of Public Works.

Table 6. EXCHANGE POOL

Offers or Requests Party	Amount in acre-feet		Price per acre-foot	Charge for Exchange Water
	Offered	Released		
There were no requests to purchase water; and therefore, operation of the Exchange Pool Program was suspended.

APPENDIX A

CONTINUING HISTORY OF WATERMASTER SERVICE AND ADMINISTRATION OF THE JUDGMENT

History of Water Resources Development

The absence of adequate surface water supplies in the West Coast Basin forced the early development of groundwater sources. In 1870, the communities of Inglewood and Long Beach tapped the artesian aquifers and springs east of the Newport-Inglewood Uplift. When these stopped flowing, water users were forced to drill shallow wells. By 1904, about 100 wells were producing a combined total of 10,000 acre-feet annually.

The techniques used to develop groundwater were advanced dramatically in 1909 with the advent of the deep-well turbine pump. Its tremendous adaptability and superior operating characteristics gave countless users access to efficient water wells. Dependable sources of water attracted industry and agriculture, and in time the demand for water exceeded the rate at which the Basin was being replenished naturally. Water levels throughout the Basin dropped below sea level in the 1920s, and wells along Santa Monica Bay were abandoned because the water was too salty. By 1932, the entire coastal reach of the Basin had been invaded by sea water.

Groundwater quality deterioration continued until 1945, when the California Water Service Company, the City of Torrance, and the Palos Verdes Water Company filed suit in the Los Angeles County Superior Court. Their objectives were to quiet title to the groundwater rights of each pumper and to establish control over groundwater extractions from the Basin. Other organizations moved to support the litigation, and the West Basin Water Association was formed in 1946. A plan to manage the Basin's water resources was set up to (1) provide a supplemental supply for major producers, (2) limit groundwater extractions, and (3) create an exchange pool to provide pumping rights for users not having access to supplemental water.

The first of these steps was realized in 1947 when the West Basin Municipal Water District was formed to distribute water from the Colorado River. The District was annexed to the Metropolitan Water District of Southern California in 1948, and that year Colorado River water began flowing into the West Coast Basin, followed by State Water Project water in 1974.

In 1946, the second and third steps were taken with the Court's preliminary hearings to define the groundwater problem and outline those areas needing more information. The Court asked the Department of Water Resources (DWR) to define the boundaries and determine the geohydrologic characteristics of the West Coast Basin. DWR spent six years analyzing the physical properties of the Basin. The major water producers also retained an Engineering Advisory Committee to aid in the investigation. As more information became available, the full magnitude of the problem became evident. In

1949, an amended complaint added 340 parties to the suit. A Report of Referee was filed with the Court on September 15, 1952.

Several years passed before water users became sufficiently alarmed by groundwater conditions to draft an Interim Agreement that reduced groundwater extractions until a final judgment could be approved. The Court approved the agreement on February 16, 1955, and appointed DWR as Watermaster to administer it.

A Final Report of Referee, filed on June 8, 1961, included data on groundwater conditions between 1950 and 1956. The report provided the information needed to draft the final judgment. On August 18, 1961, after 16 years of litigation, the Court rescinded the Interim Agreement and signed the West Coast Basin Judgment. The Judgment retained DWR as Watermaster.

A second suit, often called the American Plant Growers Case, was filed on October 31, 1956. As a result, 76 additional parties were placed under jurisdiction of the Court on March 24, 1966. Appendix B lists all parties originally under jurisdiction of the Court and all successors in interest.

The Judgment was amended on March 21, 1980, to provide for a transition in the administrative year from a water year (October 1 to September 30) to a fiscal year (July 1 to June 30). Under the Judgment, this transition, in turn, contained a short administrative year of nine months--October 1, 1980, to June 30, 1981. The administrative year starting July 1, 1981, was on a fiscal year basis.

The Judgment was further amended on September 24, 1981, to (1) establish a nonconsumptive water use right subordinate to the adjudicated rights and to permit Hughes Aircraft Company to become a party with zero water rights and (2) authorize the production and disposal of water from wells to analyze and find a method of well operation for correction of increased salinity resulting or potentially resulting from sea water intrusion.

The Judgment was again amended on March 12, 1984, to provide for nonconsumptive additional water production to recover old refined oil and to clean up the basin. The Atlantic Richfield Company was given a 5-year permit to operate an oil recovery project; because all the water produced is returned to the basin, there will be no charge to the Party's production. The Judgment was further amended on March 8, 1989, to revise the provisions for nonconsumptive clean-up operations. Chevron USA Inc. was given a permit for hydrocarbon clean-up on August 16, 1988. This permit was modified to allow the Party to increase the actual nonconsumptive production up to 5,600 acre-feet. Following an October 22, 1991 hearing, Mobil Oil Corporation was granted a permit for hydrocarbon clean-up under its Torrance Refinery.

The Judgment was further amended on July 7, 1993, effective retroactively to June 30, 1993, to modify the carryover provisions for unpumped water to 2 acre-feet or 20 percent of Adjudicated Right, whichever is greater. The over production provisions

remained at 10 percent or 2 acre-feet of Adjudicated Right, whichever is greater. The over production has to be made up the following year.

The Judgment was amended on August 30, 2001, to allow the Water Replenishment District to annually extract up to 3,300 acre-feet of saline water at its Goldsworthy Desalter wells without obtaining an Adjudicated Right, provided that the chloride content of the water extracted exceeds 1,000 ppm.

Watermaster Service

DWR forms Watermaster Service Areas at the request of water users or by order of the Superior Court.

Once a month, each groundwater pumper reports its extractions to the Watermaster and each water right account is revised by computation of (1) the amount pumped during the previous month, (2) the total amount pumped thus far during the current fiscal year, and (3) the amount that can legally be pumped during the remainder of the fiscal year. Each pumper receives an updated copy of its account every month.

Accurate measurement of groundwater extractions is absolutely necessary to the success of the Basin's management plan. Therefore, the goal of Watermaster field staff is to calibrate the water meter on every active water well at least once every two years. All available means, including system efficiency tests, are used to confirm water meter test results. Inaccurate meters must be repaired or replaced within 30 days of the date Watermaster sends a letter informing a party that a meter does not register accurately. Follow up tests on repaired meters and initial tests on new meters are scheduled whenever necessary.

One time in the fall and once in the spring of each year the depth to the static groundwater level is measured in about 130 water wells in the Basin. The measurements are used to prepare "fall" and "spring" contour maps of groundwater elevations and "spring-to-spring" maps of areas of equal change in elevation over a one-year period.

Groundwater Recharge

Natural replenishment of the Basin's groundwater supply is limited to underflow from the Central Basin, which bounds the West Coast Basin on the east.

Water spread in the Central Basin percolates into aquifers there, and eventually some groundwater crosses the Newport-Inglewood Uplift to supplement the groundwater supply in the West Coast Basin. Although the recharge water is not directly applied to the West Coast Basin, this recharge process returns large quantities of water to the ground and substantially increases natural subsurface flow from the Central Basin to the West Coast Basin. Effectiveness of the process is limited to the space available in one basin for spreading facilities and to the other basin's capability for accepting the water.

In-Lieu Replenishment

During the 1965-66 water year, the Water Replenishment District of Southern California (WRD) began a program of in-lieu replenishment. Any producer with access to supplemental water may use in-lieu replenishment water instead of water pumped from the ground. The program may be used to:

1. Alter pumping patterns within a groundwater basin;
2. Replenish areas of low transmissivity where conventional recharge techniques are ineffective;
3. Heighten the effect of injecting water to form a sea water barrier by reducing nearby extractions;
4. Reduce the amount of replenishment water purchased by WRD; or
5. Reduce the annual groundwater extraction from the West Coast Basin.

Sea Water Intrusion Barrier Projects

Sea water intrusion in the West Coast Basin along Santa Monica Bay has been effectively halted by the West Coast Basin Barrier Project, which consists of a line of 153 injection wells that parallels the coastline from Los Angeles International Airport to the Palos Verdes Hills.

The Los Angeles County Department of Public Works (LACDPW), which operates the project, injects State Water Project water, Colorado River water, and recycled water into the barrier to create a pressure ridge that impedes the inland movement of a salt water front and maintains protective groundwater elevations in the Silverado and "200-foot sand" aquifers. The scope of the project is shown in Figures 11A and 11B, which illustrate the extent to which sea water has intruded into the merged phases of the Silverado aquifer.

LACDPW is working with the West Basin Municipal Water District on the installation of a telemetry system at the West Coast Basin Barrier Project. The final design plans and specifications for the telemetry system have been completed. The construction can start as soon as the funding becomes available.

The West Basin Municipal Water District has completed a tertiary treatment system to treat reclaimed water from the Hyperion wastewater treatment plant to produce water of acceptable quality to use for injection instead of State Water Project water and Colorado River water. Delivery of water from the plant, which includes reverse osmosis as a final treatment process, began in June 1995.

A second barrier to sea water intrusion was built by LACDPW along San Pedro Bay. This project, called the Dominguez Gap Barrier Project, started operating during February 1971 in a manner similar to that of the West Coast Basin Barrier Project. In

November 2002, LACDWP added 12 observation wells and 33 injection wells at the Dominguez Gap Barrier, extending the barrier eastward. The injection wells, which were constructed at 17 sites, inject water into two aquifer zones at each site. The construction of a waterline and appurtenances for the new wells started in February 2003 and was completed in December 2004. These improvements are intended to stem leakage around the northeast terminus of the barrier.

The WRD is working with the City of Los Angeles Department of Water and Power and the LACDPW to bring recycled water to the Dominguez Gap Barrier Project. Construction of an Advanced Water Treatment Facility was completed in 2003. Construction of the recycled water pipeline to the Dominguez Barrier is complete. In February 2006, the City started the Harbor Recycled Water Project to begin delivering the Dominguez Gap Barrier with recycled water.

Desalter Projects

In 1993, the West Basin Municipal Water District constructed a 1.5 million gallon per day desalting plant (Brewer Desalter) in the City of Torrance to treat brackish groundwater. The desalter is to demonstrate desalting technology and to improve groundwater quality and management. The desalter is operated by California Water Service Company.

The WRD has constructed and is operating the Goldsworthy Desalter plant. The plant is located in the City of Torrance field services facility and is desalting approximately 210 acre-feet of saline groundwater per month. The salinity of the extractions exceeded 1,000 ppm chloride through March 2006 but has been below 1,000 ppm since then.

Water Recycling Program

The West Basin Municipal Water District has constructed a water recycling plant in El Segundo. Annually, the plant recycles 70,000 acre-feet of effluent from the City of Los Angeles' Hyperion treatment plant for distribution to industrial and landscape users and into the West Coast Basin Barrier. Initial deliveries started in June 1995.

Groundwater Levels

The volume of groundwater stored in the West Coast Basin is constantly changed by variations in subsurface inflow and outflow, artificial recharge, extractions, and, to a lesser degree, precipitation. The Silverado aquifer, underlying most of the West Coast Basin, is the most productive aquifer in the Basin. Ranging from 100 to 500 feet in thickness, it yields 80 to 90 percent of the groundwater extracted annually.

Contours of groundwater surface elevations are shown in Figures 5 and 6, and the summarization of changes in water level elevations is shown in Figure 7.

State Well Numbers have been assigned to water wells in the Basin (Figure 12).

Water Use

Population increase and industrial growth in the West Coast Basin caused water demand to increase substantially from 1943 to 1970 when growth leveled off. Prior to 1955, groundwater extractions met most of the demand. However, when the Judgment reduced extractions, imported water became the largest component of the Basin's water supply.

Figure 13 shows annual groundwater extractions and total water use since 1933.

Administration of the Judgment

The West Coast Basin Judgment contains provisions for the Parties to obtain additional pumping rights, to exceed their entitled extractions, or otherwise to make variations in their annual pumping. The procedure thus established is described below.

Exchange Pool

The Court and Parties foresaw that adjudicating water rights and limiting total extractions within the Basin would not be satisfactory to all parties. As a consequence, Paragraph VI of the Judgment authorized a water Exchange Pool to provide additional water rights to members without supplementary water. Membership in the Exchange Pool is voluntary, and any party can join by filing an "Intention to be Bound by Paragraph VI of the Judgment" with the Watermaster and the Court. When the Exchange Pool is activated, members of it are referenced with an asterisk in Appendix B. Recipients of Exchange Pool water may pump the amounts released to them in addition to their Adjudicated Right. The amounts parties may release are limited by the Judgment; however, there have been no requests for Exchange Pool water during Fiscal Year 2005-2006.

Once each July, the Watermaster opens the Exchange Pool to permit this intermember exchange of water rights. The Pool is in operation when the Watermaster asks each member to estimate its water requirement and supply for the next year. If a member has supplemental water in addition to its Adjudicated Right and if its total supply exceeds its estimated requirement, it must make a Mandatory Offer to lease a portion of its pumping right equal to the difference between its Adjudicated Right and half its estimated requirement. Under no circumstance, however, can the Mandatory Offer and the estimated requirement together exceed the total supply. This limits the Mandatory Offer to an amount which can be replaced with supplemental water. Another type of offer is called the Voluntary Offer. Any member may voluntarily offer pumping rights to the Exchange Pool if its water supply exceeds its estimated requirement and if it has no supplemental supply. However, the Watermaster must allocate all Mandatory Offers before using the Voluntary Offers. Voluntary Offers have not been used for several years.

The charge for a Mandatory Offer cannot exceed the price per acre-foot of replacement water; the charge for a Voluntary Offer cannot exceed the price per acre-foot charged by the West Basin Municipal Water District for imported water. The Watermaster

determines the amount of water needed and computes the average price to be paid. The cost per acre-foot is the weighted average price per acre-foot of all offers required to meet requests.

If a member's estimated water requirement exceeds its total water right, including leases, and if it has no supplemental supply, the difference may be requested from the Exchange Pool.

Transfers of Adjudicated Rights

Appendix B contains samples of recommended lease and sale agreements. The Watermaster recommends that documents be prepared on 8-1/2 x 11-inch paper.

Any necessary additions to the recommended agreement may be made by attaching another page.

In leasing, buying, or selling water rights, parties should be specific as to the type being exchanged, (i.e., Adjudicated Right, carryover). All leases should specify both amount of Adjudicated Right, to the nearest 0.01 acre-foot, and period of lease. All water right leases should be made on a fiscal year basis, (i.e., July 1 through June 30 of the following year).

The Watermaster keeps a list of parties who have expressed their interest in buying, selling, or leasing water rights. Any party wishing to be listed should call the Watermaster. This is not done as a Court-required function of Watermaster service. It is a courtesy informally administered to assist parties unable to resolve problems regarding an excess or deficiency of water rights. Watermaster makes no recommendation regarding transactions conducted relative to the use of this service. The names of all parties using this service are available in the Watermaster's office and may be obtained by telephone or visit to the office, or at our website <http://www.sd.water.ca.gov/>.

Rights to Store Water

In this section, the paragraphs entitled *Appellate Decision*, *WRD Interim Storage Rules*, and *Storage Projects* present information on some actions and activities that primarily involve the Central Basin and its parties. However, the information is included here because implementation of some actions and activities related to these topics may also significantly affect the water resources and the parties in the West Coast Basin.

Appellate Decision: The Cities of Long Beach, Downey, Lakewood, Signal Hill, Santa Fe Springs, Pico Rivera, and Paramount and Southern California Water Company, California Water Service Company, Montebello Land and Water Company, South Montebello Irrigation District, and Tract 349 Mutual Water Company filed suit to amend the Central Basin Judgment to allow parties to store water in the Central Basin. The Superior Court denied the petition, but the parties appealed. On June 12, 2003, the California Appeals Court released its opinion, which denied the proposed amendment.

Conjunctive Use Working Group: Starting in 2002, DWR began assembling the parties interested in discussing storage and conjunctive use in the groundwater basins. The first meeting of a Conjunctive Use Working Group (Working Group) was on July 24, 2003. Numerous meetings were held in 2003 and 2004. In late 2004 and early 2005, offers and counter offers were exchanged. After many additional meetings of the Working Group and its committees, the Working Group held its last meeting on April 19, 2005. Parties will meet again in Fiscal Year 2006-2007.

WRD Interim Storage Rules: On March 30, 2005, WRD sent out “Solicitation of Public Comments for Rules to Coordinate Storage of Water in Southeast Los Angeles County”. These draft rules proposed to govern storage of water in the groundwater basins “outside the judgment”. The Interim Rules were adopted by WRD May 18, 2005. Watermaster has taken no official position with regard to WRD’s ability to address storage without modifying the Central Basin Judgment.

Storage Projects: Prior to WRD’s adoption of the Interim Rules, WRD and the City of Long Beach signed an agreement governing the City’s groundwater storage project in the Central Basin. The City of Compton signed a similar agreement with MWD for its storage project in Central Basin.

FIGURE 12 - STATE WELL NUMBER SYSTEM

In this example, there are two wells in Tract P.

APPENDIX B

ADJUDICATED RIGHTS OF WEST COAST BASIN PARTIES

Acknowledgment of Deed of Water Rights

Will be provided upon request

Suggested Samples of Documents for Transferring Water Rights 44

Succession of Adjudicated Rights in West Coast Basin –June 2006 44

There have been no requests for Exchange Pool water.
